

Aeromark announces reaching 1 million Automated Landlord Gas Safety Records.

February 2018

Aeromark, developer of one of the UK's leading Service Management Systems, has announced the successful creation and issue of over one million Landlord Gas Safety Records (LGSR) automatically using its Mobile App.

With leading heating engineering firms choosing the Aeromark solution, this milestone demonstrates the advantage of using a fully integrated service management system to produce accurate documentation.

Field service engineers using Aeromark are able to take advantage of streamlined workflows on their mobile devices. The use of these workflows ensures that data is captured correctly then used to automatically produce LGSR Certificates.

This method of data capture ensures data is validated which avoids costly and time-consuming administration work and dramatically improves accuracy. Businesses using Aeromark typically experience an LGSR accuracy rate of over 99%.

Customers are then able to download their LGSR Certificates and any other generated documentation through dynamic web portals.

"This is a great example of how Aeromark is specialising in delivering enhanced best practice in key vertical markets with statutory compliance and certification often at the heart of service delivery" said Roger Marks, Aeromark MD

About Aeromark

Aeromark is at the forefront of Service and Asset management, Scheduling, Mobile App and GPS tracking innovation since 1990.

Optimatics, is Aeromark's smarter Mobile Workforce Management software designed specifically for service based businesses, to make managing a field based workforce as effective as possible. Optimatics comprises four individual modules; Service and Asset Management, Workforce Scheduling, Mobile Apps and GPS tracking. The four modules can be used independently in conjunction with existing systems or used as a whole where they are seamlessly integrated together.

Combined, the Optimatics modules provide one of the most powerful Service Management solutions available, delivering previously unattainable process improvements that enables businesses to make game changing decisions and achieve optimum efficiency.
